

AI Parlay Backend — System & Environment Documentation

Overview

The AI Parlay Assistant Backend is powered by FastAPI, a high-performance web framework for building APIs with Python 3. It provides core AI services and endpoints that connect to the React frontend and data sources.

System Summary

Framework	FastAPI
Server Runtime	Uvicorn ASGI server
Language	Python 3.11+
Platform	macOS
Editor/IDE	Visual Studio Code
Virtual Environment	Python venv inside /backend/venv
Default Server Port	http://127.0.0.1:8000
Reload Mode	Enabled via --reload

Tools and Dependencies

FastAPI	Main web framework for REST API endpoints
Uvicorn	ASGI web server used to run the FastAPI app
Python venv	Virtual environment to isolate dependencies
VS Code	Development IDE with integrated terminal
Pylance	Provides intellisense and linting for Python
Code Runner (optional)	Quick script execution
macOS Terminal	Used for command-line setup and management

Server Environment Details

Local Development Server:

Type: ASGI
Host: 127.0.0.1 (Localhost)
Port: 8000
Protocol: HTTP (development only)
Entry File: backend/main.py
Command to Run:

```
cd backend
source venv/bin/activate
uvicorn main:app --reload
```

API Verification

Once running, verify the backend endpoints:

- Root endpoint: <http://127.0.0.1:8000> → {"message": "AI Parlay Backend is running ■"}
- Swagger UI: <http://127.0.0.1:8000/docs>
- ReDoc: <http://127.0.0.1:8000/redoc>
